

PRODUCT INFORMATION

UNDER-HOIST AUXILIARY STAND 680KG

Safe working capacity: 680kg
Height: 1370-2045mm
Base diameter: 300mm
Weight: 16.5kg

The TRADEQUIP 1198T is a 680kg Capacity Auxiliary Stand - used under hoist to provide partial support for positioning of vehicle components during their installation and removal. An adjustable saddle sits atop a fixed column and base, providing high reach assistance to a technician for removing or installing vehicle components.

The handle of the stand incorporates a thrust bearing that makes it easy to turn, even under the extreme pressures of a heavy load. And the large saddle design cradles the work-piece, allowing the stand to be properly positioned underneath the load.

The 1198T auxiliary stand is suitable for work holding support for the following applications.

- Transmissions
- Transfer Cases
- Differentials
- Suspension Springs [front and rear]
- U-joints
- Tail and Forward Drive Shafts
- Shock Absorber mounting points
- Radiators
- Driveshafts
- Exhaust Systems
- Engine levelling whilst still mounted and during transmission removal.
- Catalytic Converters.

(Not intended to stabilize or support vehicles)
